

Finite Elements

1st draft book version

J. A. Nitsche
1986

Content

- A.1 Linear Spaces
- A.2 Linear Operators
- A.3 Hilbert Spaces
- A.4 Adjoint Operators and Associated Bilinear Forms
- A.5 Unbounded Operators in Hilbert Spaces
- A.6 Scales of Hilbert Spaces
- A.7 Approximation Theory in Hilbert Scales

- B.1
- B.2
- B.3 Weak Solutions of Elliptic Problems
- B.4 The Regular Sturm-Liouville Problem and Associated Bilinear Forms
- B.5 Applications to the Regular Sturm-Liouville Problem
- B.6 An Integral Equation
- B.7 The Scale of Sobolev Spaces

- C.1 The Standard Galerkin Procedure
- C.2 Splines
- C.3 Approximation Properties of Splines
- C.4 Projections in Hilbert Scales
- C.5 Finite Element Spaces
- C.6 Second Order Boundary Value Problems, the Standard Ritz Method and Generalizations
